June 4, 2022

Hello! I'm Ulises. I'm 23 years old and I'm from Buenos Aires, Argentina.

I live in a town called Martinez and I have three dogs and one cat, as you can see I love animals. I also love sports and I've practiced many of them throughout my life like tennis, soccer and boxing. Nowadays I train four/five times a week and I play soccer on weekends with my friends. I love cars and technology too. I am finishing my Electronic Engineering degree at the University of Buenos Aires. My first job was at 18 years old and since then I've never stopped, I like being productive. I'm currently working for Ford Motor Company as an Engineer trainee and I really like the job, but programming is something that always caught my attention and I'm excited about the idea of working in this area.

I'm very productive and I like to dedicate the time needed by the things I commit to. One skill that I think it could describe me is my facility for learning and how fast I learn. That's something I can bring to 37Signals. I also like working in teams and I get along very well. I have knowledge of programming in C, C++, Assembly (I've had three subjects of programming in my degree) and Python (I use it for subjects too). I've used AWS Cloud 9 for a project of images processing that consists applying a desired function to the image (It divides the images in an imaginary grid of complex numbers and applies the function that the user wants to each complex number in the grid). I use GitHub too (there you can see this project). I've learned HTML, CSS and some Javascript on my own and now I'm learning some Ruby (also on my own). I also have programmed in Javascript for a subject in which I've participated coding segments and functions in some exercises (You can find it on GitHub too).

I really like 37Signals' working philosophy and I think the same way. I like to enjoy the things I'm working on and not making them stressing. I like working with a computer in a remote way (I'm currently working like this). I think it is great because not all days you perform at your best in the same place. It also changes with the time of the year and the seasons. So, having the chance to work from where you feel comfortable is something that makes you more productive and gets the best of you. I think 37Signals makes it possible and has great projects like Basecamp. I've seen what it is about and I think it can change the way to work, I believe it will make projects and programs easier to follow up and to work on.

Finally and not least important, I think 37Signals can bring me a lot of experience and knowledge that I will use to bring good things to this company. I think it's a constant feedback and that is what makes it work. It is a win-win.
